About us

Founded in 1987 at Belgium, Ecu Worldwide (erstwhile Ecu-Line) is a global leader in NVOCC services. Backed by rich legacy, passion and agility, we have brought in world-class innovations in LCL (less than container load) and set several benchmarks in the industry. Alcargo Logistics Ltd., India's largest integrated logistics solutions provider in private sector, acquired the company in 2006 which resulted in further efficiency of our operations. In May 2016, we rechristened our identity to Ecu Worldwide and consolidated our global presence by bringing our offices under a single name to denote our well-knit offices and highly coordinated operations. Led by a strong management team, our foothold now stands strong at 300+ offices in 160+ countries, offering LCL and FCL services across the globe. Our wide variety of value added services and outsourcing solutions make us exceptionally competent in handling and transporting complex cargo to anywhere in the world, seamlessly.

Profile / Roles & Responsibilities

- Working with internal parties as well as customers to deliver large sets of tariffs in requested Excel formats.
- This data needs to be obtained from the primary business intelligence system and parsed into specific formats on regular intervals.
- We need someone with the skillset to identify and fix issues in these datasets and get them ready for delivery as well as build frameworks to maintain these formats over longer periods of time.
- Meet with customers and translate their requirements into systems designs / requirements for IT

Requirements

- Advanced proficiency in Excel, including writing and maintaining VBA Macro's;
- Meet with customers, present and sell ECU's IT systems as added value to the main product, and understand and follow up on their requirements
- Manage projects that customers or internal stakeholders have asked of us to do
- communicate with customers on technology advancements that ECU has been making so to showcase technological thought leadership
- Able to work with and identify issues in large sets of data;
- Work with various parties to find solutions and persist until the issues have been found within the timeframe provided;
- Make smart use of data and industry knowledge to self-fix certain issues using various other datasets that are available.
- Knowledge of SQL / Business Intelligence systems is an advantage; -
- Programming / web development proficiency is a plus as we may require proof of concept applications to be made presentable on short notice.

Our offer

You will be part of one of the world's leading companies and work with seasoned colleagues. Your salary will be up to market standards including meal vouchers, pension plan and health insurance. The dynamic within the company provides ample opportunities for growth.
