

ProductBuilder.

Vacature Frontend developer

We're looking for an epic design-focused developer who can help us with the development and maintenance of our core product, ProductBuilder. You will help our team with the creation, expansion and maintenance of features in our dashboard and in our internal products.

About us

With ProductBuilder we change the way software is built. We taught computers (artificial intelligence) to write clean and good codes and made it 10-times faster, better and cheaper to create software. In other words, we can build & maintain software for companies almost entirely automated! Our goal is to help entrepreneurs, SME's and Startups with launching and maintaining their software ideas in a matter of days instead of months/years. Our offices are located at Rijnkaai 37, 2000 Antwerp, Belgium. Near the MAS (Museum aan de stroom)

What we're looking for:

- Experience with HTML, CSS and Javascript.
- Knowledge of the ins and outs of Sketch, Photoshop and other design related tools (ex. Figma).
- Knowledge about working with API's.
- Good communication skills.
- Experience with SCRUM project management. A feeling for design.

ProductBuilder.

Vacature software engineer

Your responsibilities:

- You maintain and improve our dashboard.
- You maintain and improve our website.
- You improve the UX and UI for our products.
- You convert ideas from the product team into working features.
- You'll do quality & assurance work for our dashboard & website.

What you get:

- A competitive salary + fringe benefits.
- Ambitious and highly talented colleagues.
- Experience in a company that is operating on the edge of technology.
- The opportunity to plan your own calendar and projects.
- The opportunity to help (and work for) the fastest growing companies.

Does this seem to be something for you and your passions / ambitions?
