FULL-STACK .NET DEVELOPER

As a Belgian pioneer in healthcare software Remedus focuses on providing web-based and mobile software solutions that enable healthcare providers to monitor the health status of their patients in their home environment.

Remedus partners with hospitals and pharmaceutical companies to deliver software that supports physicians in their decisions to quickly adapt the treatment of their patients at home based on the registrations by the home nurses and patients during their treatment at home. This allows Remedus to collect all data necessary to guarantee quality-driven healthcare for patients with chronic diseases or complex treatments at home.

Remedus facilitates optimal treatment of these patients by continuously developing its innovative software platform, RemeCare and the RemeCare app.

RemeCare is a highly innovative software platform, integrated with the Belgian eHealth Platform and with the software tools of hospitals and physicians. In order to further develop our platform, we are looking for developers to join our software development team.

Full-stack .net developer

You will be part of our development team, where you will be involved in the further expansion of our own product. At Remedus you will find many challenges:

- Front-end development
- Back-end development
- Mobile app development
- Complex algorithms
- IoT medical devices
- Integration with external applications

You will be constantly confronted with new ideas and suggestions from the market that need to be further developed.

You will be part of a motivated and driven team that takes ownership and is responsible for the further development of this product.

You will be part of a small team where you will take on a broad scope of responsibilities (front-end, back-end, integration with external parties, software packages, deployment, etc).

1.1 Skills?

You are a 'techie' with an interest in various technologies and you get a boost from creating tangible and innovative products. You are positive, look for solutions and are not afraid to take initiative. You are involved in open questions or issues and proactively think about better ways to build your software.

You have experience in

- Back-end development in C# and Entity Framework
- Front-end development in AngularJS using TypeScript
- Mobile app development in Ionic
- Unit testing
- Source control (TFS, Git, Gated check-in, code review, build/release definitions)
- SQL Server and T-SQL

- Working in an Agile team

You are familiar with the following topics: CQRS, Bootstrap, NPM, SSIS, SSRS, PowerShell, Azure, DevOps, IIS, REST, Web services, ADFS, BPMS

As a senior full-stack developer, you will also be able to:

- Make good architectural decisions
- Make correct estimates of the workload based on functional analyses
- Assisting Medior/junior colleagues in their development
- Technical analysis to be carried out

Medior and junior developers are given every opportunity to develop themselves.

1.2 Why Remedus?

At Remedus, you'll have the opportunity to help build very tangible solutions for patients as part of a dedicated, driven and quality-focused team.

We are proud of what we build and believe that our software shall be instrumental in the shift from hospital-based care to home-based healthcare.

Remedus is a Belgian company with a family atmosphere and a lot of attention for its people.

1.3 Interested?

Send your resume and cover letter to HR@remedus.be and we will get in touch asap!
